Profile Summary

Enthusiastic and Software Engineering graduate with hands-on experience in university-based projects. Good in Java Spring Boot for backend development and React.js for frontend applications.

Passionate about building scalable and efficient software solutions. Eager to apply my skills in a professional environment and gain industry experience through an internship.

Core Competencies

- React.js
- JavaScript, TypeScript
- Redux
- Rest APIs
- Software Architecture
- Java
- Spring Boot
- Debugging Skills
- MySQL/ MongoDB
- Rest API
- Git
- Node / Node.js
- Express.js
- Python
- AI & ML
- Agile, Jira
- UI/UX, SCSS, Figma
- HTML, CSS

Education

BSc. In Software Engineering (Hons)

Cardiff Metropolitan University (UK)

International College of Business and Technology (ICBT), Colombo, Sri Lanka March

Major: Web Development | Minor: Machine Learning

Overall Grade: 2.1 – 2nd Class Upper Division

Projects

TNA AGENCIES (REAL ESTATE WEBSITE)

This is my Software Engineering final project. This project has machine learning(minor) and web development(major) parts. Web applications were developed utilizing the MVC architecture to manage efficiency. The application was implemented using Java, Spring Boot Framework, JavaScript, React Library, ES6, Python, and MySQL database technologies. Add a real estate advertisement, update an ad, remove an advertisement, add to a favorite advertisement, authentication, authorization, and admin panel are the features of this web application. Additionally, a user can estimate a house or property price by providing the required details.

ONLINE FOOD ORDERING WEBSITE

This online food ordering web application was developed using Java Spring Boot for the backend, the React JavaScript library (ES6) for the frontend, and MySQL as the database, following the MVC architectural pattern. The system supports three primary user roles, restaurant owner, customer, and admin. Restaurant owners can manage their restaurant profiles, including adding, updating, or deleting restaurant details, as well as handling order management. Customers can explore a variety of restaurants, place orders, complete online payments securely through the Stripe payment gateway, and track their orders in real-time. The platform provides a seamless and user-friendly experience, ensuring efficient interaction between restaurant and customer while giving admins full control over the system.

Skills & abilities

- Problem solving
- Communication
- Leadership
- Quick Learner
